ATHENS TOWNSHIP
Notice of Pavement Sealcoating - 2020

As part of our road maintenance program, Athens Township crack filled roads in 2018. In the spring of 2020, Athens Township will be having several roads seal coated. It is important that we protect our investment! Sealcoating should increase the life of the roads significantly, including preventing further damage or erosion due to water or UV rays. The product and roads were selected based on expense, quality and referrals, and product application requirements.

The project will tentatively begin in late **May** or **June** of **2020**. The sealcoat being used dries in a few hours depending on the conditions. The contractor is aware that they must work around the flow of traffic [rush hour], minimize the inconvenience of residents, and allow for emergency vehicles if necessary. The contractor has years of experience in handling these situations.

The roads that will be included for sealcoating are:

1. **265th Avenue NE** [from Highway 65 east to Hastings St NE]
2. **Xylite Street NE** [from County Road 9 south to county road 56]
3. **266th Lane NE** off of Xylite Street
4. **Rum River Drive NW** [from the north end to where it merges with 257th]
5. **257th Ave NW** [from Rum River Drive to county road 23 (Xeon)]
6. **249th Ave NE** [from Highway 65 to 6th Street NE where pavement ends]

The walking path at Collin Park will be crack filled and seal coated at the same time. We will also be **striping** Xylite Street immediately after sealcoating as well.

We understand the inconvenience this project may cause and appreciate your patience and understanding during the process. Best Regards,
